COMBINATION THERAPY FOR TREATING HYPERCHOLESTEROLEMIA

ABSTRACT OF THE DISCLOSURE

The invention relates to methods for treating hypercholesterolemia and atherosclerosis, and reducing serum cholesterol in a mammal. The methods of the invention comprise administering to a mammal a first amount of a bile acid sequestrant compound which is an unsubstituted polydiallylamine polymer and a second amount of a cholesterol-lowering agent. The first and second amounts together comprise a therapeutically effective amount.

The invention further relates to pharmaceutical compositions useful for the
treatment of hypercholesterolemia and atherosclerosis, and for reducing serum
cholesterol. The pharmaceutical compositions comprise a combination of a first amount
of an unsubstituted polydiallylamine polymer compound and a second amount of a
cholesterol-lowering agent. The first and second amounts comprise a therapeutically
effective amount. The pharmaceutical compositions of the present invention may
optionally contain a pharmaceutically acceptable carrier.
